THE STICK II ™

a true two-line call processor

DESCRIPTION

The Stick II ™ is a true *two-line call processor* that lets users share equipment such as, fax machines, modems, credit card readers, tank monitors, POS equipment, and other devices *between two phone lines*!

The Stick II screens each call for CNG fax and touch tones and routes the call to the appropriate equipment, leaving other phones and devices undisturbed.

The Stick II can even answer and process calls from both lines simultaneously!

The Stick II has five independent ports and lets multiple devices share two phone lines. Eliminating dedicated lines and incorporating the line sharing technology of The Stick II adds up to huge savings.

UNIQUE FEATURES

Call In/Dial Out Long Distance Saver

Save money by avoiding expensive calling card charges or long distance cellular rates. When away from your home or office, but in the local calling area, simply call in to The Stick II and enter a secret access code to connect to the available second line! Now you can make an outbound long distance call using your home or office long distance rates!

Port-to-Port Communication and Data Transfer

Communicate with devices/phones connected to The Stick II with ease! Connect two computers to The Stick II and send data from one to another. It's like a mini-network! Connect a fax/modem-equipped PC and a fax machine and you've got a low res scanner!
